Optical Filters for Industry and Research

Our specialty is the fabrication of soft coated narrow band optical filters in a wide range of configurations and bandwidths with central wavelengths from 400nm through 2000nm. We stock a variety of filters and integrate our filters with several solid-state photo detectors. We will work hand in hand with your R&D teams to build a high quality, custom made, target specific optical filter that meets your needs. Our highly refined production process can provide substantial savings to you.

General Information

Intor Inc.
Incorporated: 02/1994
NAICS: 333314
DUNS #: 825061468
Cage Code: 7W5S5

Unique Skills

R&D Prototype development
Ability to complete complex requests
Quality Products with competitive pricing

Certifications

Awaiting HUB Zone Approval
ISO 9001:2015 Certified
